1. Stronghold AI (Ponteiro SAS)

RETROSPECTIVE FORMAT REVIEW — historical decision and evidence as of 2026-07-22; research was not refreshed. Evidence-strength ratings are retrospective editorial judgments because the original assessment did not record them. USD-denominated source amounts are shown as EUR equivalents at the ECB rate of EUR 1 = USD 1.1408 for 2026-07-22 (rounded); original documents use USD. The three questions below are an editorial prioritization of that record, not a current recommendation.

Decision Brief

WAIT · No cheque recommended

Resolve before investing: Commercial interest is not verified backlog; Independent product performance is unavailable; Production economics and cash needs are incomplete

Investment Case and Decision

Investment case. Stronghold targets a consequential defence need: affordable counter-UAS sensing that can operate in contested environments. The founders bring relevant electronic-warfare and technical experience, and AURA and LUMINA are specific products rather than a broad AI claim. If the systems prove reliable and procurements convert into repeat production, the company could earn a valuable position in a growing market.

Evidence supporting the case. The historical review found public evidence for founder credentials, product existence, AURA field exposure and RoverTech joint development. RoverTech's announcement corroborates a memorandum and programme collaboration, which is meaningful external validation. The source memo reports approximately EUR 41.2 million of commercial interest after conversion, but the review found that figure combines contracts with LOIs, quotations, demonstrations and pipeline; it is not verified backlog. [\[D1\]](#) [\[W1\]](#) [\[W2\]](#)

Counterarguments and risks. The public partnership does not substantiate the memo's five-year purchase characterization or minimum commitments. Independent results for detection, false alarms, environmental performance and reliability were absent. Preliminary hardware margin omits integration, service, warranty, logistics and working capital, leaving production funding unclear. At an approximately EUR 17.5 million post-money SAFE cap, the entry price assumes substantial commercial conversion. The historic return model lacks a distinct total-loss case. [\[D1\]](#) [\[D2\]](#) [\[FX1\]](#)

Why this verdict; what could change it. The historical WAIT reflects missing proof, not weak market relevance or founder capability. Recommend zero until enforceable commitments, independent product results and fully loaded production economics are verified. These establish demand, procurement readiness and a financeable margin path. Then reassess price, SPV costs and net returns using final legal terms and a full-loss scenario. This reflects 2026-07-22 evidence and is not a current recommendation.

Next action: Do not commit; review the stated blocking conditions.

Return analysis unavailable. Explicit ownership, fees and exit assumptions were not supplied.

Counter-UAS and electronic-warfare sensing systems, as described in the historical memo. Customer: Defence and government programmes; customer mix and binding order status require verification.

Seed · SPV exposure through a Delaware series partnership into a French SAS, per supplied materials. · Historical materials state a EUR 17.5 million post-money SAFE cap, approximately 4% expenses and 20% carry. Conversion and investor-level terms require document review.

Market timing: Defence procurement demand is relevant; programme timing, customer commitments and production conversion remain uncertain.

Evidence as of 2026-07-22

Qualitative investment judgment; no personal return hurdle supplied

Seven-Factor Assessment

Category	Weight	Score / 5	Evidence strength	Key driver
Team	25%	4.5	Medium	Relevant defence and electronic-warfare experience; key résumé claims and production hiring need verification
Market	20%	4.6	Medium	Strong demand tailwinds; fragmented procurement and intense competition
Product	15%	3.8	Medium	Defined sensing products with field exposure; independent reliability results are missing
Traction	15%	3.1	Low	Public partnership confirmed; headline commercial interest is not reconciled to binding orders
Unit Economics	10%	3.0	Low	Promising preliminary hardware margin; delivered cost and working capital are unknown
Defensibility	10%	3.4	Low	Integration and field data may help; company-owned IP and durable advantage are unproven
Terms	5%	2.5	Medium	Headline cap and SPV costs disclosed; conversion and investor rights need review

Evidence strength: High = key claims independently corroborated by authoritative evidence; Medium = some corroboration, with material gaps; Low = evidence is mostly reported, incomplete or conflicting; Unknown = evidence quality could not be assessed. Unknown is not a negative score.

Weighted quality summary: 3.8 / 5 · Score coverage: 100%. Scores are descriptive; no automatic verdict thresholds.

Team. The founders combine electronic-warfare and technical credentials with defence-program experience. Several specific résumé claims and the ability to build the required engineering and production team were not independently verified.

Market. Counter-UAS demand is supported by defence priorities, but procurement is fragmented, competitive and dependent on programme timing. The company's broad market estimate is not used as proof of obtainable sales.

Product. AURA and LUMINA address defined sensing needs and have reported field exposure. Independent detection, false-alarm, environmental and reliability results were not supplied.

Traction. RoverTech publicly confirmed a memorandum and joint development. The supplied approximately EUR 41.2 million combines contracts with nonbinding interest and pipeline; binding orders, invoices and collections were not reconciled.

Unit Economics. The supplied hardware bill of materials suggests a possible margin, but excludes material delivery, service, warranty, logistics and working-capital costs. Scalable delivered economics remain unproven.

Defensibility. Field data, integrations and qualification history could strengthen the position as deployments grow. A durable technical lead, company-owned IP and freedom to operate were not established in the reviewed evidence.

Terms. The supplied materials state a EUR 17.5 million post-money SAFE cap, approximately 4% expenses and 20% carry. Conversion, rights and final investor-level costs require document review; no follow-on investment is assumed in this review.

Decision-Critical Diligence

I1 · Commercial interest is not verified backlog BLOCKER

The historical memo combines contracts, LOIs, an NDA, demonstrations, quotations and pipeline into an approximately EUR 41.2 million headline figure. [\[D1\]](#) [\[D2\]](#)

Decision impact: The order value and production forecast cannot be underwritten as committed revenue.

Evidence needed: Counterparty-level schedule linking executed agreements to enforceable quantities, price, cancellation rights, deliveries, invoices and cash collected.

Reassessment trigger: Independent review confirms material binding minimum purchases and credible delivery timing.

I2 · Independent product performance is unavailable BLOCKER

The historical materials make performance claims but do not provide independent detection, false-alarm, environmental and reliability results. [\[D1\]](#) [\[W1\]](#)

Decision impact: Field performance is central to procurement, repeat deployments and product liability exposure.

Evidence needed: Independent test results against agreed operating conditions and a customer reference.

Reassessment trigger: A qualified third party or customer confirms performance against stated requirements.

I3 · Production economics and cash needs are incomplete BLOCKER

The assessment identifies certification, warranty, working capital and industrialisation as material but unresolved costs. [\[D1\]](#) [\[D2\]](#)

Decision impact: The company may require substantially more capital or deliver below the forecast margin.

Evidence needed: Fully loaded unit-cost, production-capacity, certification, warranty and working-capital plan tied to the forecast.

Reassessment trigger: A bottom-up plan supports positive delivered margin and a financeable path to serial production.

Top Questions for the Founder

1. Please reconcile the approximately EUR 41.2 million headline line by line, identifying binding minimum quantities, cancellation rights, delivery dates, invoices and cash collected.

Evidence: Counterparty schedule linked to redacted executed agreements, invoices and receipts. · Linked issue I1

2. Which independent test report supports the detection, false-alarm and reliability claims, and may we speak with the test customer?

Evidence: Test report with conditions, results and customer permission for reference. · Linked issue I2

3. Can you share the fully loaded unit economics and working-capital plan for serial production?

Evidence: Costed production plan including certification, warranty, integration and working capital. · Linked issue I3

Ask only these primary questions now. A founder assurance is not verification; request the indicated evidence or a route to confirm it.
